NEXT

under-sink reverse osmosis

NEXT is a range of under-sink reverse osmosis systems designed to provide complete water treatment directly from the home faucet. Proper use of the system can significantly reduce the levels of most water pollutants, such as pesticides, nitrates, fertilizers, heavy metals, and pathogenic microorganisms, while also enhancing the taste and flavour of the water. The use of NEXT systems also helps reduce the consumption of bottled water, thus contributing to a cleaner environment with less waste.

units major features

- High pressure pump
- AC plug 2 pins C type - CEE 7/16 (Europlug)
- Min and Max pressure switch
- AIC activated carbon pre-filter
- Installation kit with dedicated tap
